Bayshore Recycling Earmarks \$5.7 Million for Unprecedented Install of Solar Panels

On Eve of Earth Day, Woodbridge Company Announces Plan for Largest Concentration of Solar Power Among U.S. Recycling Companies

WOODBIDGE, N.J. - April 19, 2007 - Bayshore Recycling Corp. has committed to purchase the largest solar panel system in the recycling industry to provide sustainable, non-polluting power at its recycling facility in the Keasbey section of Woodbridge, N.J., company officials announced today.

"With Earth Day upon us, it is vital for business to not only talk about ways to be environmentally-friendly, but to demonstrate what can be accomplished on a grand scale through natural technologies," said Valerie Montecalvo, president of Bayshore Recycling.

The company is investing \$5.7 million for the 700-kilowatt system, to be installed later this year. Energy generation from the solar panels will be used to power a majority of the company's operations, including the recycling of concrete, asphalt, brick and block. Bayshore processes and transforms these materials into marketable products.

Montecalvo said the solar panels, working together, will have the capacity to power the equivalent of 120 homes. A total of 3,500 solar panels will be installed on roofs; each will generate 200 watts of power by converting the sun's rays into clean energy.

The panels, each sized at 3.5 feet by 5.5 feet, will serve as semi-conductors. When sunlight hits the panels, it will cause electrons to flow, creating clean electricity with zero pollution throughout the Bayshore facility.

She noted Bayshore's recycling and remediation activities require a steady increase in energy. As an environmentally-responsible company, Bayshore does not want to burn fossil fuels or pull an increasing amount of electricity off the power grid. Over the past eight years, company officials have studied many alternative energy options in preparation for this landmark investment.

"Solar energy is the easiest energy source to obtain permits for, it is the cleanest and it is the most efficient way to provide energy," Montecalvo said.

Solar technology is part of a much larger plan for Bayshore Recycling, as the company is actively taking steps to become the most diverse "EnviroPark" on the East Coast. Plans are under development to create a diverse campus of "green" businesses that use each others' manufactured product to advance the latest construction recycling technologies.

Woodbridge Mayor John McCormac, who recently announced several environmentally-friendly municipal initiatives and programs geared to maximize energy savings, said it is a pleasure to see a township-based corporation make such a drastic investment in clean energies.

"I am pleased that Bayshore Recycling recognizes the need to develop and incorporate environmentally-friendly, energy-saving solutions in its day-to-day operations," the mayor said. "Bayshore is a shining example of a corporate citizen advancing clean energy technologies to benefit its business and the community as a whole."

Bayshore Recycling Corp., (www.bayshorerecycling.com), was founded in 1995 to manage and recycle construction debris. Located on the waterfront in the Keasbey section of Woodbridge, the company has steadily expanded its environmentally-friendly services, now including Montecalvo Disposal Services, Inc., Coastal Meta Recycling Corp., Montecalvo Contracting Corp. and Environmental Soil Management of New Jersey, LLC.
